

Vessel Calls at U.S. Ports 2000

Vessel Calls at U.S. Ports
2000

January 2001

Office of Statistical and Economic Analysis
www.marad.dot.gov/marad_statistics

Preface

The following report contains data on calls for oceangoing vessels of 10,000 DWT or greater at U.S. ports, oil terminals and offshore lightering points. The calls are presented in terms of vessels and vessel capacity (calls weighted by vessel deadweights (DWT)).

The report is divided into two sections, Summary Tables and Detailed Tables. The Summary Tables section presents a profile of calls at U.S. ports in terms of active fleet characteristics (vessel

type, age and size), and a 3-year time series of calls at U.S. ports by vessel type. The Detailed Tables section presents calls at major (top 50) ports, by vessel type and size.

Comments and recommendations as to content and format of the report can be made at www.pao.marad@marad.dot.gov.

In addition, to learn more about the Maritime Administration or the Maritime industry, visit the agency's website at www.marad.dot.gov.

Notes and Sources	51

Highlights

In 2000, vessel calls at U.S. ports accounted for about 10 percent of vessel calls at world ports (Table H-1). Of the 59,955 U.S. calls, 29 percent were by containerships, 24 percent were by tankers, and 21 percent were by dry bulk carriers.

For the same year, 43 percent (6,253) of the tanker calls at U.S. ports were by double hull tankers. Of these, 2,774 were by tankers smaller than 70,000 DWT, which carry primarily petroleum products, 2,941 were by tankers between 70,000 and 149,999 DWT, and 538 were by tankers 150,000 DWT or larger (Figure H-1).

In 2000, 48 percent (6,353 vessels) of the active world fleet called at U.S. ports. The shares range from 34 percent of gas carriers to 62 percent of ro-ro's (Table H-2). Seventy-three percent of the vessels that called in U.S. ports made fewer than 10 U.S. calls (Table H-3).

Active Fleet (Vessels) that Called At U.S. Ports, 2000			
Vessel Type	U.S. Call	World Fleet	% U.S. Call
Tanker	1,163	2,769	42.0
Dry Bulk	2,762	4,982	55.4

Table H-3

Highlights

The average size (per call) of commercial vessels calling at U.S. ports was 45,531 DWT or 14 percent larger than vessels calling at world ports (Table H-4). Dry bulk carriers calling at U.S. ports were 12 percent smaller than those calling at world ports. Grains, which are generally shipped on smaller vessels than other major bulk cargoes (coal and iron ores) accounted for 43 percent of U.S. major bulk trades (U.S. Maritime Administration),

compared to only 19 percent of worldwide major bulk trades (Fearnley's Review).

Average Vessel Size (DWT) Per Call, by Vessel Type, 2000			
Vessel Type	U.S. Ports	World Ports	% Diff.
Tanker	78,802	75,270	4.7
Dry Bulk	41,054	46,869	-12.4
Container	37,792	29,906	26.4

Table H-5

Highlights

For U.S. ports, there tends to be regional specialization in some services, with tanker and dry bulk calls concentrated at Gulf ports, and containership calls concentrated at Atlantic and Pacific ports as shown on previous page (Table H-5).

In year 2000, the top 20 U.S. ports accounted for 77 percent of the overall vessel capacity calling at U.S. ports.

For the period 1998 to 2000, ro-ro (includes ro-ro/containerships and vehicle carriers) calls at U.S. ports increased by 28 percent (Table H-6). Vehicle carriers accounted for 95 percent of the increase, reflecting a 33 percent increase in U.S. vehicle imports, and a movement to just-in-time delivery schedules (higher call frequencies).

Containership calls at U.S. ports increased by 5.7 percent from 1998 to 2000, but containership capacity calling at U.S. ports increased by 12.1 percent as average vessel size increased by 5.9 percent over this period (Table H-7).

U.S. Calls by Vessel Type, 1998-2000

Notes and Sources

Geography

Starting with year 2000 source data, ports in the Columbia River, Hampton Roads, Los Angeles/Long Beach and San Francisco Bay areas were reported on an individual basis. For historical consistency, year 2000 calls at these ports are presented in this report as totals for the respective areas.

Columbia River Ports:

Astoria
Columbia River
Kalama
Longview
Portland
Vancouver
Willbridge

Hampton Roads Area:

Chesapeake
Hampton Roads
Hopewell
Lynnhaven Roads
Newport News
Norfolk
Portsmouth
Richmond
Yorktown

Los Angeles/Long Beach:

Long Beach
Los Angeles

San Francisco Bay:

Alameda
Antioch

Benicia
Concord
Crockett
Martinez
Oakland
Pittsburg
Redwood City
Richmond
Rodeo
Sacramento
San Francisco
Selby
Stockton

Vessel Types

The vessel categories used for this report include the following types:

Tankers: Petroleum Tankers.

Dry Bulk: Bulk Vessel, Bulk Containership, Cement Carrier, Ore Carrier, Wood-chip Carrier.

Container: Container Carrier, Refrigerated Container Carrier.

RO/RO: RO/RO Vessel, RO/RO Container, Vehicle Carrier.

Chemical Tankers: Chemical Tankers.

Gas Carriers: LNG Carrier, LNG/LPG Carrier, LPG Carrier.

Other Cargo: General Cargo, Partial Containership, Refrigerated Ship, Barge Carrier, Livestock Carrier, Combination Carriers.

Notes and Sources

Capacity

Throughout the report, capacity = $\sum_i \text{calls}_i \times \text{DWT}_i$, where calls_i and DWT_i are calls and DWT for vessels_{i...n}. Deadweight tonnage (DWT) is the cargo which a ship can carry when immersed to the appropriate load line, expressed in metric tons.

Size Threshold

The report includes only oceangoing self-propelled vessels of 10,000 DWT or greater. To place the size threshold in perspective, the following table displays both U.S. and world vessel calls in year 2000 for vessels larger and smaller than the threshold. The larger vessels

accounted for about 92 percent of the vessel capacity-

Call Types

In addition to calls at ports, calls at oil terminals and offshore lightering points are included in this report.

Translakes calls are excluded from the report.
